## TEST REPORT FOR

**700MHz 40W Transmitting Remote Unit  
Model: mBSC0700U-040-RUSF01**

**Tested To The Following Standards:**

**FCC Part 27C**

**Report No.: 95155-4**

**Date of issue: December 16, 2013**

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

## ADMINISTRATIVE INFORMATION

### Test Report Information

**REPORT PREPARED FOR:**

BTI Wireless  
6185 Phyllis Dr. Unit D  
Cypress, CA 90630

**REPORT PREPARED BY:**

Morgan Tramontin  
CKC Laboratories, Inc.  
5046 Sierra Pines Drive  
Mariposa, CA 95338

REPRESENTATIVE: Raymond Shin  
Customer Reference Number: 9913648

Project Number: 95155

**DATE OF EQUIPMENT RECEIPT:**

November 27, 2013

**DATE(S) OF TESTING:**

November 27 – December 4, 2013

### Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

*Steve Behm*  
*Director of Quality Assurance & Engineering Services*  
*CKC Laboratories, Inc.*

## Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

**TEST LOCATION(S):**  
CKC Laboratories, Inc.  
110 Olinda Place  
Brea, CA 92823

## Software Versions

CKC Laboratories Proprietary Software	Version
EMITest Emissions	5.00.14
Immunity	5.00.07

## Site Registration & Accreditation Information

Location	CB #	TAIWAN	CANADA	FCC	JAPAN
Brea A	US0060	SL2-IN-E-1146R	3082D-1	90473	A-0147

## SUMMARY OF RESULTS

### Standard / Specification: FCC Part 27C

Description	Test Procedure/Method	Results
RF Power Output	FCC 2.1033(c)(14)/2.1046/27.50(c)(3)	Pass
Occupied Bandwidth	FCC 2.1033(c)(14)/2.1049(l)	Pass
Spurious Emissions at Antenna Terminal	FCC 2.1033(c)(14)/2.1051/27.53(g)	Pass
Field Strength of Spurious Radiation	FCC 2.1033(c)(14)/2.1053/27.53(g)	Pass
Band Edge		Pass
Intermodulation		Pass
Out of Band Rejection	2-11-04/EAB/RF	Pass

## Conditions During Testing

This list is a summary of the conditions noted for or modifications made to the equipment during testing.

Summary of Conditions
None

## EQUIPMENT UNDER TEST (EUT)

The following model was tested by CKC Laboratories:

**700MHz 40W Transmitting Remote Unit, mBSC0700U-040-RUSF01**

The manufacturer states that the following additional model is identical electrically to the one which was tested, or any differences between them does not affect their EMC characteristics, and therefore it meets the level of testing equivalent to the tested model:

**700MHz 40W Transmitting Remote Unit, mBSC0700U-040-RU**

### EQUIPMENT UNDER TEST

#### **700MHz 40W Transmitting Remote Unit**

Manuf: BTI Wireless

Model: mBSC0700U-040-RUSF01

Serial: 10935702007113100001

### PERIPHERAL DEVICES

The EUT was tested with the following peripheral device(s):

#### **ESG Vector Signal Generator**

Manuf: Agilent

Model: 4438C

Serial: MY45091601

#### **Cable**

Manuf: Pasternack

Model: RG223/U

Serial: #10

#### **Attenuator 30db Pad**

Manuf: Weinschel

Model: 49-30-43

Serial: KW075

#### **Step Attenuator 110dB pad**

Manuf: HP

Model: 8496B

Serial: 1350A01241

#### **50 ohm Load**

Manuf: Generic

Model: NA

Serial: NA

## FCC PART 27C

This report contains EMC emissions test results under United States Federal Communications Commission (FCC) requirements for licensed devices.

### FCC 2.1033(c)(14)/2.1046/27C - RF Power Output

#### Test Data

Test Location: CKC Laboratories Inc. • 110 N. Olinda Place • Brea, CA 92823 • 714-993-6112

Customer: **BTI Wireless**  
 Specification: **RF Output Power**  
 Work Order #: **95155** Date: 11/20/2013  
 Test Type: **Conducted Emissions** Time: 13:36:38  
 Equipment: **700MHz 40W Transmitting Remote Unit** Sequence#: 4  
 Manufacturer: BTI Wireless  
 Model: mBSC0700U-040-RUSF01  
 S/N: 10935702007113100001

#### *Test Equipment:*

ID	Asset #	Description	Model	Calibration Date	Cal Due Date
T1	AN02869	Spectrum Analyzer	E4440A	2/6/2013	2/6/2015
T2	AN03239	Cable	32022-2-29094K-	10/30/2013 24TC	10/30/2015

#### *Equipment Under Test (\* = EUT):*

Function	Manufacturer	Model #	S/N
700MHz 40W Transmitting Remote Unit*	BTI Wireless	mBSC0700U-040-RUSF01	10935702007113100001

#### *Support Devices:*

Function	Manufacturer	Model #	S/N
ESG Vector Signal Generator	Agilent	4438C	MY45091601
Cable	Huber & Suhner	Sucoflex 104A	12237/4A
Attenuator 30db Pad	Weinschel	49-30-43	KW075
Step Attenuator 110dB pad	HP	8496B	1350A01241
50 ohm Load	Generic	NA	NA

***Test Conditions / Notes:***

The EUT is placed on the test bench. Tx In is connected to an ESG Signal generator via cable Sucoflex 104A. ANT port is connected to 30db attenuator and 110db step attenuator. A spectrum analyzer is connected to attenuators via cable 32022-2-29094K-24TC. RX out port is terminated to 50 ohm load.

The evaluation is performed at the antenna port using Channel power function of the spectrum analyzer.

Freq: 746-757MHz

Signal protocol: LTE-TM1.1 1.4MHz, 5MHz, 10MHz

The RF output power was measured with signal generator output power as listed in the result table for RF Output power of 40 W, 20W, 10W

21°C, 45% Relative Humidity

The EUT is a RF amplifier operating the 746-757MHz band under part 27. The manufacturer does not provide an antenna for sale with the product; hence EIRP is not measured nor calculated.

The end user of this product is to exercise proper engineering judgment to select the appropriate antenna to comply with the EIRP limitation set forth

**27.50**

**(b) The following power and antenna height limits apply to transmitters operating in the 746-763 MHz, 775-793 MHz and 805-806 MHz bands:**

**(4) Fixed and base stations transmitting a signal in the 746-757 MHz, 758-763 MHz, 776-787 MHz, and 788-793 MHz bands with an emission bandwidth greater than 1 MHz must not exceed an ERP of 1000 watts/MHz and an antenna height of 305 m HAAT, except that antenna heights greater than 305 m HAAT are permitted if power levels are reduced below 1000 watts/MHz ERP accordance with Table 3 of this section.**

**40W**

Modulation	Signal Generator Output Power (dbm)	Cable Loss (db)	Input Power (dbm)	Measured Output Power (dbm)	Measured Output Power (W)

Power Sensor	Agilent	E4412A	MY41502826

**Test Conditions / Notes:**

The EUT is installed on an open rack to simulating final installation, and placed on the wooden table. Tx In is connected to a remotely located ESG. ANT port is connected to 30db attenuator and 110db step attenuator and then to a power meter for verification of output power level. RX out port is terminated to 50 ohm load.

Freq: 746-757MHz

Signal protocol:LTE-TM1.1\_5MHz

Power : 40 W ( Max rated power)

LTE-TM1.1\_5MHz      748.65MHz, 751.5MHz, 754.35MHz

Frequency range of measurement = 9 kHz- 8 GHz.

## SUPPLEMENTAL INFORMATION

### Measurement Uncertainty

Uncertainty Value	Parameter
4.73 dB	Radiated Emissions
3.34 dB	Mains Conducted Emissions
3.30 dB	Disturbance Power

The reported measurement uncertainties are calculated based on the worst case of all laboratory environments from CKC Laboratories, Inc. test sites. Only those parameters which require estimation of measurement uncertainty are reported. The reported worst case measurement uncertainty is less than the maximum values derived in CISPR 16-4-2. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2. Compliance is deemed to occur provided measurements are below the specified limits.

### Emissions Test Details

#### TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

#### CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in dB $\mu$ V/m, the spectrum analyzer reading in dB $\mu$ V was corrected by using the following formula. This reading was then compared to the applicable specification limit.

<b>SAMPLE CALCULATIONS</b>	
Meter reading	(dB $\mu$ V)
+ Antenna Factor	(dB)
+ Cable Loss	(dB)
- Distance Correction	(dB)
- Preamplifier Gain	(dB)
= Corrected Reading	(dB $\mu$ V/m)

#### TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

<b>MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE</b>			
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz
RADIATED EMISSIONS	1000 MHz	>1 GHz	1 MHz

#### SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or carrot ("") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

##### Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

##### Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

##### Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point the measuring device is set into the linear mode and the scan time is reduced.
